## Terms of Acceptance:

**When a patient seeks** chiropractic health care and we accept them for such care, it is essential for us both to be working towards the same objective.

**Health:** is the process of the body continually striving for optimum function, not merely the absence of symptoms.

**The primary goal of chiropractic** is to eliminate misalignments or joint dysfunction within the spinal column, pelvis, and extremities. These misalignments are called **subluxations**, and they diminish the body's ability to achieve its maximum health potential by interfering with normal nervous system and musculoskeletal system function. Over time, joint dysfunction results in a significant decrease in the , and may directly or indirectly lead to any number of painful conditions. Dr. Wise uses a comprehensive postural and physical examination to evaluate a patient for subluxations, and may refer some cases for additional spinal imaging if he deems necessary.

**Adjustment:** the correction of a subluxation. It is utilized in all the stages of care, and helps to reestablish proper communication between the brain and the body. Dr. Wise uses a variety of adjusting techniques, including instrument-based as well as manual spinal manipulation of the spine and extremities.

**Cranial Laser Reflex Therapy (CLRT):** a procedure developed and researched by Dr. Nick Wise that uses photobiomodulation (low-level laser therapy) on specific cranial points and brain areas with the objective of normalizing muscle tone, reducing musculoskeletal pain, and optimizing the brain's response to stress. Similar in nature to laser acupuncture, CLRT uses painless laser stimulation and gentle tapping on cranial reflexes to immediately relax muscles and decrease musculoskeletal pain.

**Exercise:** specific postural movements used in corrective care to obtain maximum spinal stability.

**Dr. Nick Wise does not** offer to diagnose or treat any disease or condition other than subluxations. However, we recognize that often people have diseases and conditions that may resolve while under chiropractic care. If during the course of chiropractic spinal examination we encounter non-chiropractic or unusual findings, we will advise you. If you desire specific medical advice, diagnosis, or treatment for those findings, we will recommend that you seek the services of a health care provider who specializes in that area.

I, \_\_\_\_\_ have read and fully understand the above statements and I therefore accept chiropractic care on this basis.

## Informed Consent to Chiropractic Treatment

**The nature of chiropractic treatment:** The doctor will use his/her hands or a mechanical device in order to move your joints. You may hear a “click” or “pop”, such as the noise when a knuckle is “cracked”, and you may feel movement of the joint. Various ancillary procedures, such as hot or cold packs, electric muscle stimulation, laser therapy, therapeutic exercise, traction or muscle/massage therapy may also be used.

**Possible Risks:** As with any health care procedure, complications are possible following a chiropractic manipulation. Serious complications could include fractures of bone, muscular strain, ligamentous sprain, dislocations of joints, or injury to intervertebral discs, nerves or spinal cord. Cerebrovascular injury or stroke could occur upon severe injury to arteries of the neck. Delayed-onset muscle stiffness or soreness may occur after the first few days of treatment. The ancillary procedures could produce skin irritation, burns or minor complications.

**Probability of risks occurring:** The risks of serious complications due to chiropractic treatment have been described as “rare”, about as often as complications seen from the taking of a single aspirin tablet. The risk of cerebrovascular injury or stroke, has been estimated at one in one million to one in twenty million, and can be even further reduced by screening procedures. The probability of adverse reaction due to ancillary procedures is also considered “rare”. Mild muscle soreness for a few days is common after a treatment.

**Other treatment options which could be considered** may include the following:

- Over-the-counter analgesics. The risks of these medications include irritation to stomach, liver and kidneys, and other side effects in a significant number of cases.
- Medical care, typically anti-inflammatory drugs, tranquilizers, and analgesics. Risks of these drugs include a multitude of undesirable side effects and patient dependence in a significant number of cases.
- Hospitalization in conjunction with medical care adds risk of exposure to virulent communicable disease in a significant number of cases.
- Surgery in conjunction with medical care adds the risks of adverse reaction to anesthesia, as well as an extended convalescent period in a significant number of cases.

**Risks of remaining untreated:** Delay of treatment allows formation of adhesions, scar tissue and other degenerative changes. With time, these changes can further reduce skeletal mobility, and induce chronic pain cycles. It is quite probable that delay of treatment will complicate the condition and make future rehabilitation more difficult.

**Unusual risks:** I have had the following unusual risks of my case explained to me. I have read the explanation above of chiropractic treatment. I have had the opportunity to have any questions answered to my satisfaction. I have fully evaluated the risks and benefits of undergoing treatment. I have freely decided to undergo the recommended treatment, and hereby give my full consent to treatment.
